

ISD-237

Image Solenoid Driver with factory installed supply and load cables

PRODUCT OVERVIEW:

The ISD-237 controls up to four solenoids and a 120V variable speed pump or blower

FEATURES / BENEFITS

- Individual or group control of up to four solenoids
- Standalone operation (with display) or as a module in an Image System
- On/off control for single speed loads
- Variable speed phase angle power control for variable speed load
- Massage mode that cycles through the power range
- Diagnostics through bi-directional communication with the smart display
- Infrared logic communication with other Image control modules reduces cable requirements
- Multiple units can be stacked side by side to create custom configurations
- Supports conductive water level detection
- Supports conductive and capacitive water level detection and temperature sensing using ITW-209
- Printed circuit board is conformal coated for protection against corrosion
- Physical box dimensions approximately: 6.80" x 2.15" x 3.45" (170mm x 55mm x 88mm)
